Affordable, Intelligent Access Control for Multifamily Properties

Say Goodbye To Keys!

Keyless Entry with Smart Credentials

Now you can eliminate the hassles of key management when tenants move out, saving you time and money. PremiSys™ makes it easy to add, modify, or delete cardholder access anytime.

- Manage your entire property from a single database.
- Residents may use a single credential in all of the Schlage® locks throughout the property.
- Unique mobile app allows property managers to manage credentials and update locks.

Eliminate the hassles of key management!

PremiSys Resident Manager™ manages your Schlage® "no-tour" locks.

A Single Database Does It All!

PremiSys is a fully networked system so you can secure your entire facility using a single database. Mix and match wireless locks and hardwired readers within the same system for a truly flexible solution. PremiSys will manage all of your locks at the residence units, parking garage, fitness center, swimming pool, perimeter doors, and more!

PremiSys manages all of your locks from a single database.

PremiSys™ Resident Manager™

Manage Resident Access Through a Mobile Device

PremiSys™ Resident Manager is a mobile app that gives you complete control of your Schlage® "no-tour" locks using your mobile device. Resident Manager **reduces installation costs** by eliminating the need for a network infrastructure to communicate with the locks.

- Manage resident information and assign access rights
- Connect and manage property doors
- Manage a large number of residents in multiple buildings from a single interface
- Download activity from locks to generate audit reports
- Resident Manager is part of the PremiSys suite of products and can be used in conjunction with other door configurations including Wi-Fi, Gateway IP, Gateway RSI, and hardwired doors.

"No-Tour" Functionality

The enrollment reader writes the access information directly to the credential. When the resident presents an enrolled credential to the Schlage® "no-tour" lock for the first time, the information is uploaded to the lock and stored in the lock's database. To remove or change access, simply update the lock with the new information.

* PremiSys Resident Manager is available for Apple® iOS 10.X or greater and Android™ 5.0 or greater. Requires Bluetooth 4.0 or greater.

Manage resident access through a mobile app.

Momentarily unlock the door if resident forgets their credential.

It's easy to enroll residents and give them access rights.

PremiSys Resident Manager is compatible with these Schlage® locks.

Schlage Control Smart Locks (deadbolt or interconnect design)

Schlage LE Mortise Locks (options include deadbolt and interior privacy push button)

Schlage NDE Wireless Locks with ENGAGE technology

Solutions To Control Your Common Areas and Perimeter Doors

Common areas and perimeter doors have different security needs from resident units. With PremiSys™, you can tailor your system to meet those unique security requirements; from restricting access to specific days and times, generating audit reports of everyone who accessed the facility, to instantly locking down the facility doors. Whether you need advanced door control or full, enterprise access control, PremiSys can manage it through a single database.

Video Integration

Easy to Update Locks

Manage all of the lock and cardholder records from a single, convenient location. When a resident moves out, you can quickly and easily remove their cardholder access from the system with one keystroke.

- Easily provide or restrict access rights across all of your locks and readers.
- Limit access during specific times, including holiday schedules.
- Create automatic lock schedules.

Video Integration

PremiSys integrates with video management systems from leading manufacturers.

- View live video from cameras associated with readers and wireless locks.
- View recorded video associated with lock "Alerts."
- Run history reports with links to associated video.

Modify tenant access with a single keystroke!

Reports

The PremiSys enterprise reporting package provides detailed audit reports that help you track activity. With the easy-to-use Scheduler Wizard, you can generate and email customized reports on a regular schedule.

- Report on transactions, locks, cardholders, cardholder access rights, and more.
- Battery Life Report identifies the locations of low and critically low batteries. (Not available with all locks.)
- Schedule reports to be automatically emailed to specified recipients.

Reports

Easy to Install and Service

Wireless smart locks are easy to install. Because they don't require wiring or modification to door frames, they are ideal for both new construction as well as retrofits.
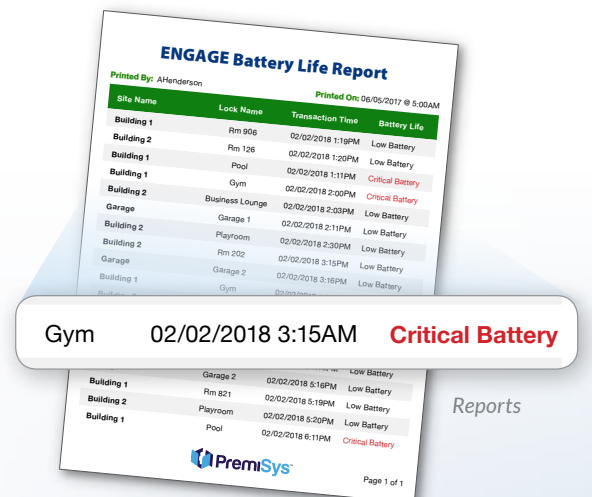

- No cylinder design means the locks are pickproof and bump proof
- UL, fire-rated, and ADA compliant
